

Ayman Abdelfattah

aymanabdefattah1@gmail.com | (587) 338-0415 | linkedin.com/in/ayman99

Skills

Languages: Python, C#, SQL, PL/SQL, C/C++ , Java, JavaScript, PHP, HTML/CSS.

Technologies & Tools: Git, React, Containers (Docker), RESTful APIs, Oracle Database, Microsoft Azure.

Experience

Software Developer II, Computronix – Edmonton, AB

May 2023 – Nov 2025

Internal Systems

- Worked to maintain and enhance critical software for the management of client projects, including documenting changes, workflows, and operational procedures.
- Supported improvements to internal systems that contributed to steady quarter-over-quarter increases in user satisfaction survey scores.
- Enhanced internal documentation tool using C#, fixing long-standing bugs and adding new features.
- Led the onboarding of new hires, introducing them to our systems and standards and mentoring them throughout their training, contributing to a 20% faster ramp-up time.
- Developed a C# script leveraging the Atlassian Confluence REST API to automate migration of legacy MediaWiki knowledge base, modernizing documentation standards and saving company effort of an estimated 500 hours.
- Designed and developed a full-stack project resource reallocation feature in C#/.NET, improving project planning efficiency and flexibility and reducing project manager workload by an average of 5 hours monthly.
- Performed on-site and remote deployments to client databases and systems during after-hours maintenance windows, ensuring smooth updates and minimal downtime.
- Developed migration tools to parse information from the release manifest, automating and streamlining the migration process for increased efficiency and accuracy, reducing average migration time by 50%.
- Refactored and optimized SQL queries and database indexes for multiple reports, reducing generation times by up to 90%.

Product Development

- Implemented enhancements across multiple product modules, streamlining management for our clients and supporting their end users, reducing average issue resolution time by 25%.
- Enhanced the product's front-end accessibility features to meet AODA and ADA compliance standards, improving the experience for users with disabilities.

City of Hamilton Project

- Worked as part of a team to architect and build a full-scale permitting and licensing management system to deliver an \$8M project within a 5000-hour development budget.
- Managed user access, authentication, and permissions using Azure AD to maintain secure environments for a government system.
- Developed a C# automation tool to export data definitions using proprietary REST APIs and databases into structured spreadsheets, eliminating manual documentation and giving clients on-demand access to system data structures.

Software Development & AI Model Evaluation, DataAnnotation

January 2026 – Present

- Used multiple agentic coding tools (Claude Code, Codex, OpenCode, Cursor) across WSL/Linux environments on large-scale development tasks, identifying failure modes and edge cases to improve model reliability.
- Analyzed and reproduced bugs, logical errors, and edge cases in AI-generated code across multiple languages, providing detailed written feedback to improve model accuracy.
- Engineered targeted prompts to deliberately stress-test AI model behavior across diverse coding scenarios, identifying failure patterns and inconsistencies.
- Reviewed and ranked competing AI-generated responses on complex technical tasks, generating structured human preference data to support RLHF-based model alignment fine-tuning efforts.

Education

University of Alberta

BSc in Computing Science, Minor in Mathematics

Dec 2022
